An afternoon of clouds over Colombia

5 November 2026, Colombian time. GOES-East looks at it every 10 minutes; here, one image per hour.
From 17:00, the GeoColor product switches to its night view (the sun sets between 17:10 and 18:00, depending on the region).

How it was made: all in RustGIS web (web.rustgis.app), with four scripts. 1 · Data: GOES-East GeoColor tiles from NASA GIBS, with the time in the address,
and Colombia's boundary. 2 · View: one map per hour (Duplicate Map with its own image). 3–4 · Layouts in Spanish and English, by script: github.com/jgregoriorincon/30DayMapChallenge-2026

Data: NOAA GOES-East ABI, GeoColor product (CIRA/NOAA), served by NASA GIBS (Worldview); accessed 2026-11-06. Boundary: geoBoundaries (CC0).
